

GABATOR

For the use of a Registered Medical Practitioner or a Hospital or a Laboratory Only

Abbreviated Prescribing information for **GABATOR** [Gabapentin 100mg, 300mg and 400mg Capsules] [Please refer the complete prescribing information available at www.torrentpharma.com]

PHARMACOLOGICAL PROPERTIES: Gabapentin exerts its anticonvulsant effect and analgesic activity.

INDICATION: As an adjunctive therapy in the treatment of partial seizures with or without secondary generalization in adults with epilepsy.

DOSAGE AND ADMINISTRATION: The usual effective dose of gabapentin is 900-1800 mg/day and given in three divided doses (three times a day) using 300mg or 400mg capsule.

CONTRAINDICATION: Hypersensitivity to gabapentin or any other component of the product.

WARNINGS & PRECAUTIONS: When dose reduction, discontinuation or substitution of alternative anticonvulsant medication is needed, this should be done gradually over a minimum period of one week. Not use in the treatment of absence seizures. Use cautiously in patients with mixed seizure disorders that include absence seizures, a history of psychotic illness, mood and behavioral disturbances and driving or operating machinery.

DRUG INTERACTIONS: Aluminium and magnesium containing antacid, probenecid and cimetidine.

ADVERSE REACTIONS: Somnolence, dizziness, ataxia, fatigue, nystagmus, tremor, diplopia, amblyopia, dysarthria, amnesia, asthenia, paresthesia, arthralgia, purpura, dyspepsia, anxiety, increase in weight, urinary tract infection, pharyngitis, leucopenia, nervousness, rhinitis, male sexual dysfunction (impotence). Like other AEDs there have been rare reports of urinary incontinence, pancreatitis, elevated liver function tests, erythema multiforme, Stevens Johnson Syndrome (where a causal relationship has not been established), confusion, depression, emotional lability, hostility, abnormal thinking, psychoses/hallucinations and blood glucose fluctuations in patients with diabetes, myalgia, headache, nausea and/or vomiting.
