

BRITZILAM 10 mg

Abbreviated Prescribing information for Brivaracetam Tablets (10 mg) [Please refer the complete prescribing information available at www.torrentpharma.com]

PHARMACOLOGICAL PROPERTIES:

Mechanism of action: Brivaracetam displays a high and selective affinity for synaptic vesicle protein 2A (SV2A), a transmembrane glycoprotein found at presynaptic level in neurons and in endocrine cells. Although the exact role of this protein remains to be elucidated it has been shown to modulate exocytosis of neurotransmitters. Binding to SV2A is believed to be the primary mechanism for brivaracetam anticonvulsant activity

INDICATIONS: As adjunctive therapy in the treatment of partial-onset seizures in patients 16 years of age and older with epilepsy.

DOSAGE AND ADMINISTRATION: The recommended starting dose is either 50 mg/day or 100 mg/day based on physician assessment of required seizure reduction versus potential side effects. The dose should be administered in two equally divided doses, once in the morning and once in the evening. Based on individual patient response and tolerability, the dose may be adjusted in the dose range of 50 mg/day to 200 mg/day.

WARNINGS & PRECAUTIONS: Suicidal ideation and behavior, hepatic impairment, contains lactose, contains sodium.

ADVERSE REACTIONS: influenza, neutropenia, decreased appetite, type I hypersensitivity, depression, anxiety, insomnia, irritability, suicidal ideation, psychotic disorder, aggression, agitation, dizziness, somnolence, convulsion, vertigo, upper respiratory tract infections, cough, nausea, vomiting, constipation, fatigue.
